Construction Site Panels .....	32
Technical Information.....	36

# INDOOR TYPE MODULAR PANEL

Indoor type panels have a modular structure, comprised by joining parts, all of which are standard. Installations inside the panel are made functionally and easily through various installation profiles. It also offers an aesthetically pleasing appearance, thanks to its unique design.

## Technical specifications

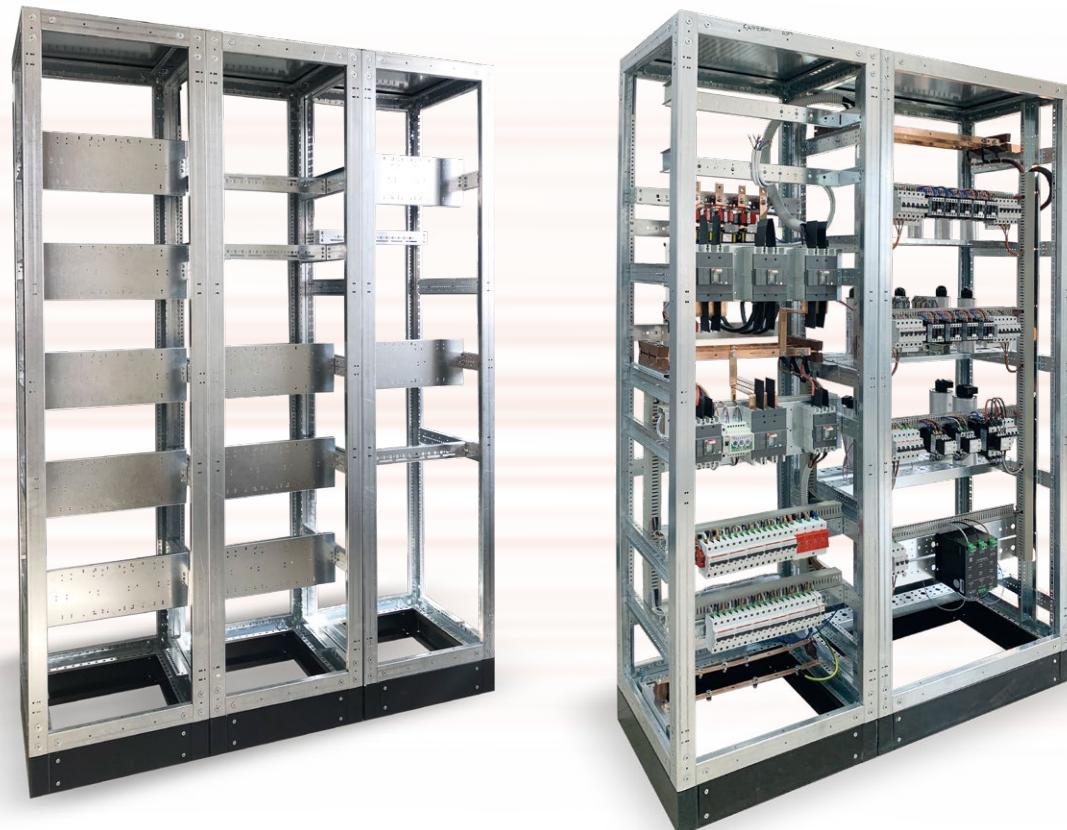

Level of protection	IP20
Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 7035
Type of Application	Indoor

## Panel Structure

- Electrical distribution panels all of which are of a modular system have a flexible structure that can address various requirements.
- It allows optimum utilization of different areas with a rich selection of sizes and complete accessory product range.
- It is the right choice in choosing electrical cabins with its extremely easy installation and cabling processes.

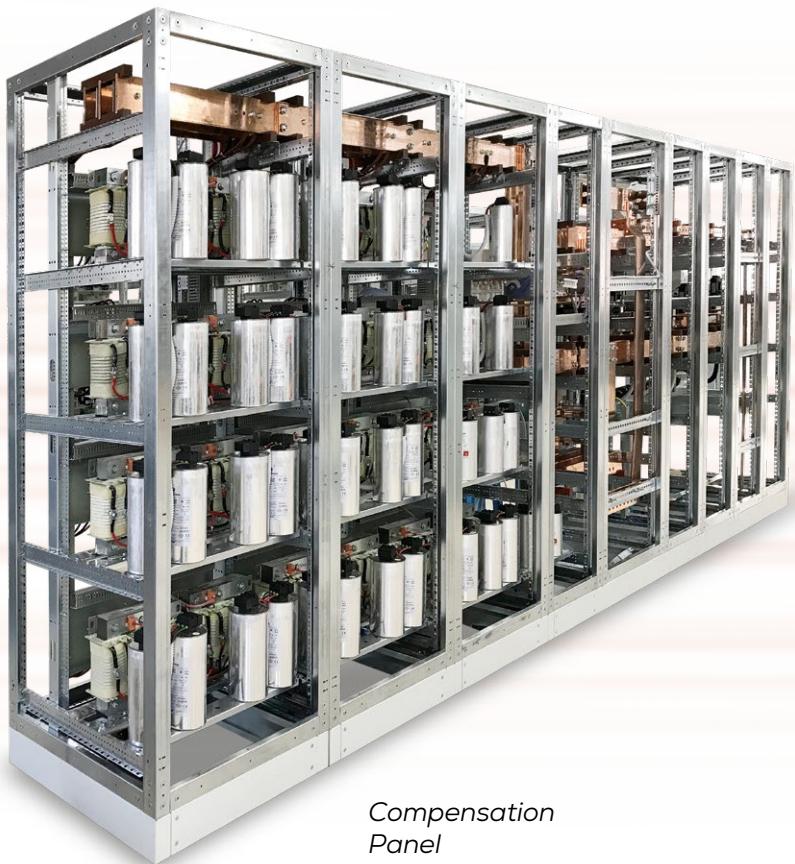

Dimensions (mm)

Height	Width	Depth
1300	400	400
1500	500	500
1700	600	600
1900	700	700
	800	800

\*Please see page 16 of our product catalog for detailed panel dimensions and technical drawings.

## E-Installation Applications

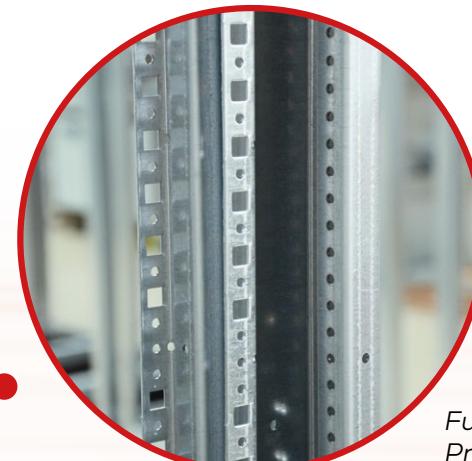

## Structure Profiles

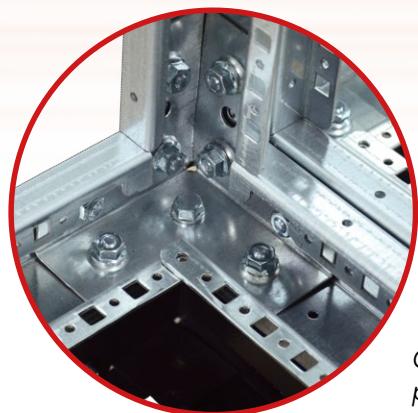

- Doors can be installed on the front and back of panels can also be increased in number side by side, thanks to their modular structure. They can also be lined up as an (L), using corner module.

Assembly of depth,  
width and pillar  
profiles.

Functional Pillar  
Profile

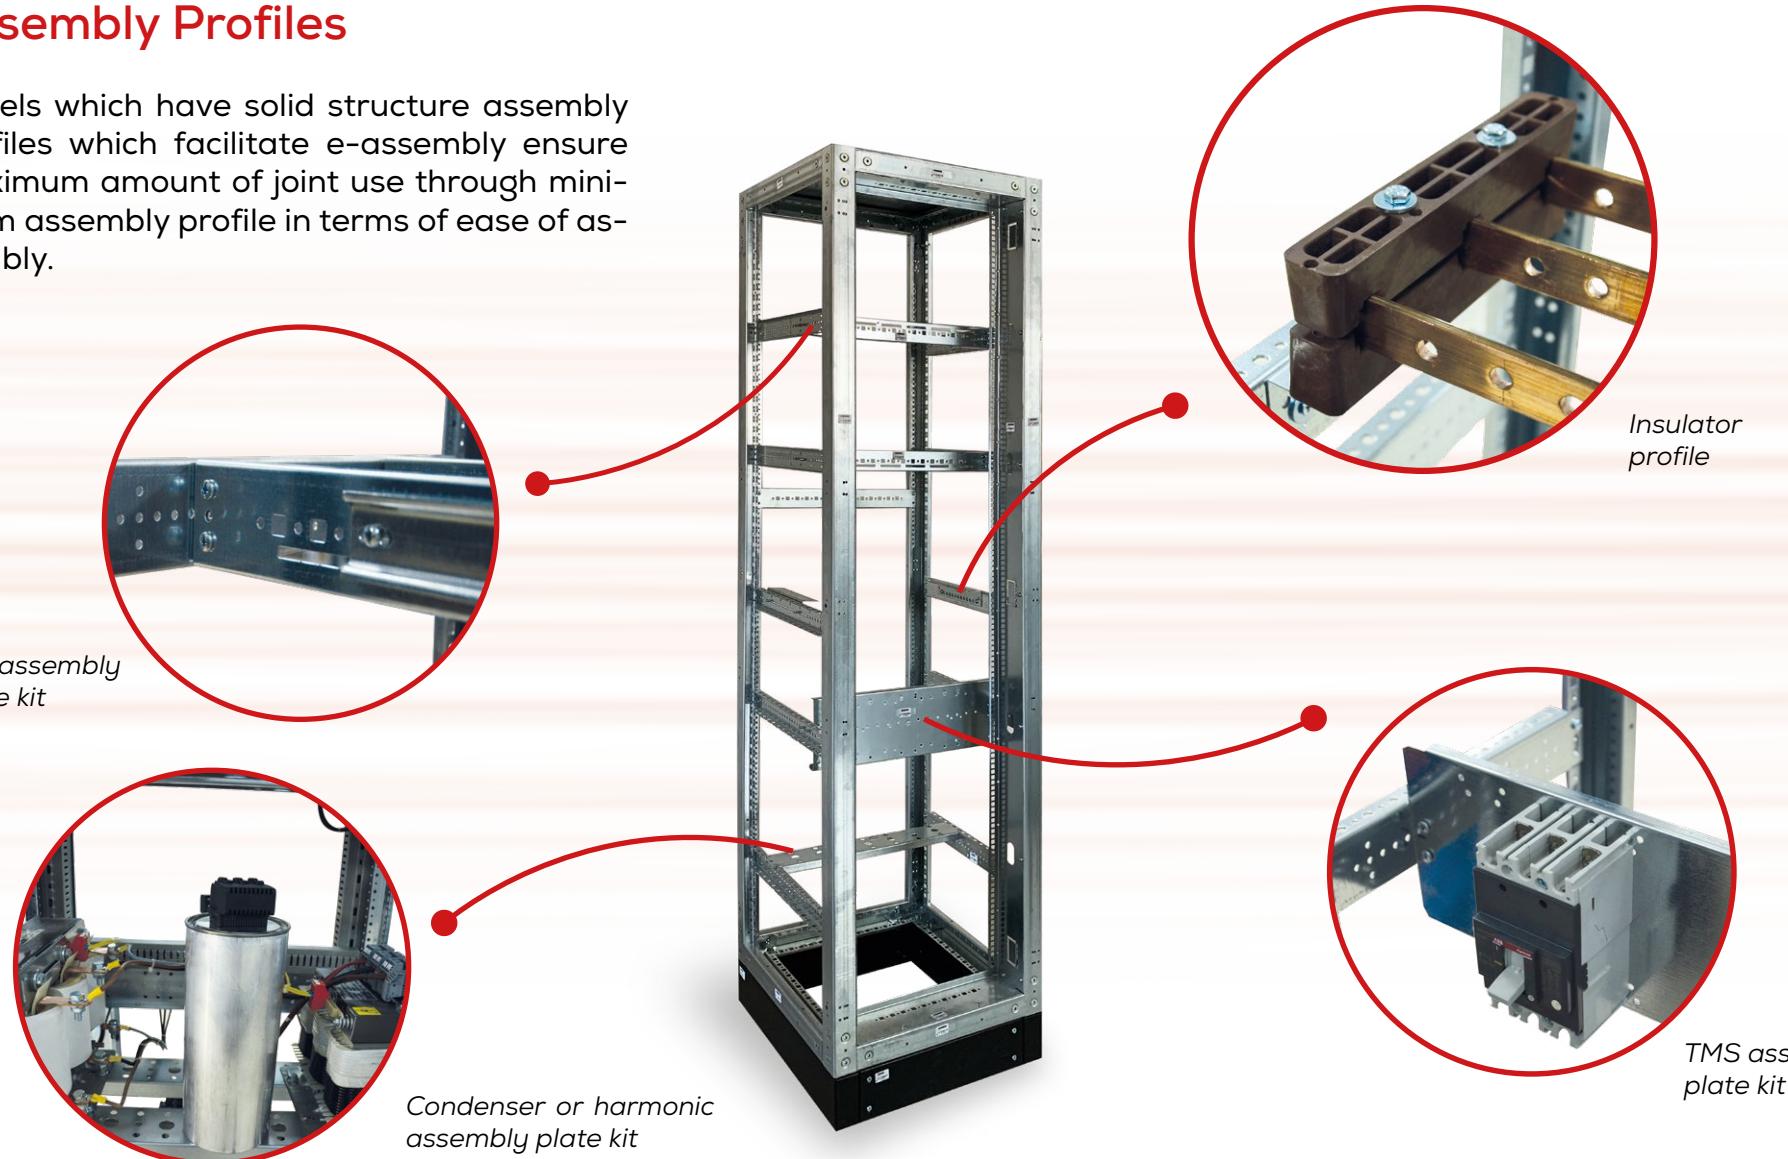

Corner connection  
profile

Base

## Assembly Profiles

- Panels which have solid structure assembly profiles which facilitate e-assembly ensure maximum amount of joint use through minimum assembly profile in terms of ease of assembly.

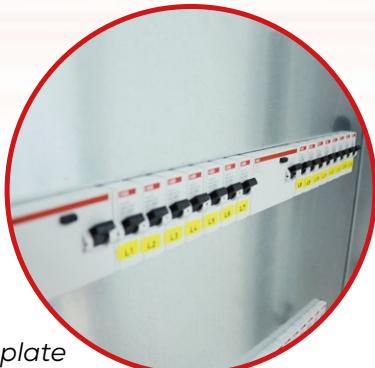

## Features of Panels

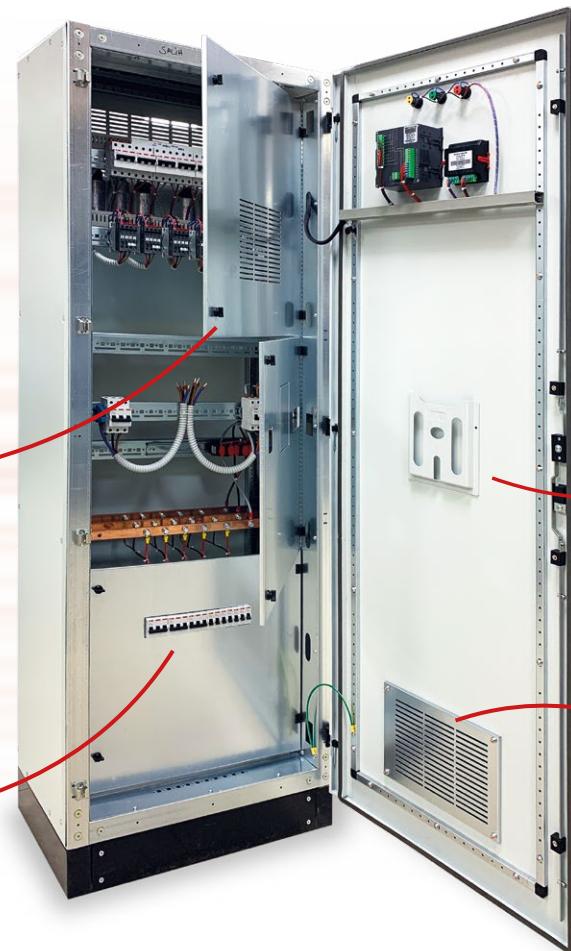

- There are inner covers which prevent direct contact between switch mechanisms and electrical connections. Hinges and mini locks are used in all inner covers.

Mini lock

DIN rail front face plate

Panel pocket

Ventilation unit

## Features of Panels

- Locking system, used in front doors, interlocks the door and panel pillar profile in four different points.
- Opening system of the door locks is of lift and turn type. It is suitable for locked or unlocked use. Side and rear covers can be opened and closed.

Bracket and  
openable covers

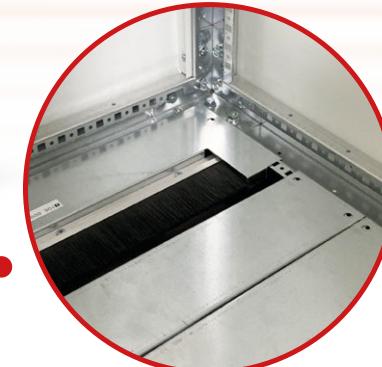

Seal

Functional lock  
mechanism

TMS front  
face plate

Cable entry  
covers

# COMPENSATION PANEL WITH DRAWER

Compensation panels with drawers differ from regular compensation panels in terms of their structural characteristics. Power and control connections are fixed on the panel. Stage switch materials are collected in a drawer.

## Technical specifications

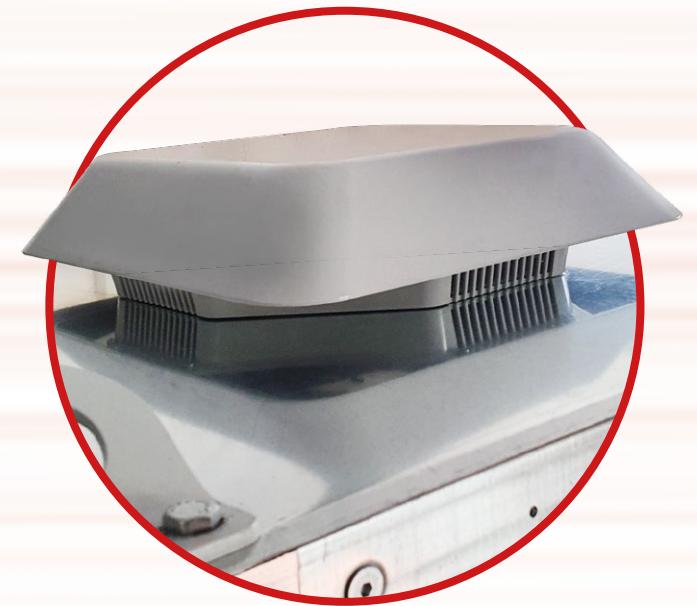

Level of protection	IP20
Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 7035
Type of Application	Indoor

## Panel Structure

- A drawer is used for every stage in the panel. Electrical connections between the drawer and the panel are carried out via the Plug-in system.
- Vertical busbar application is used for power transitions in stage drawers.
- There are the hunt reactor and input cell sections for panel feed, independent of the drawers.
- Panel installation, transfer, maintenance and repair processes can be performed easily.
- There is a cooling fan in every section.

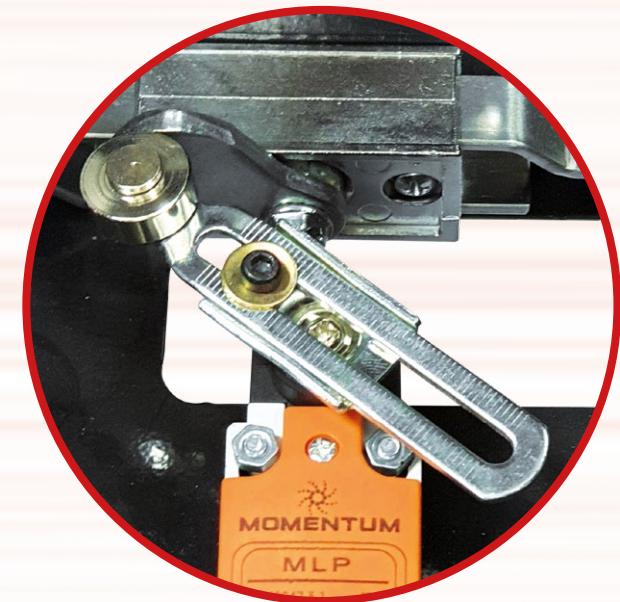

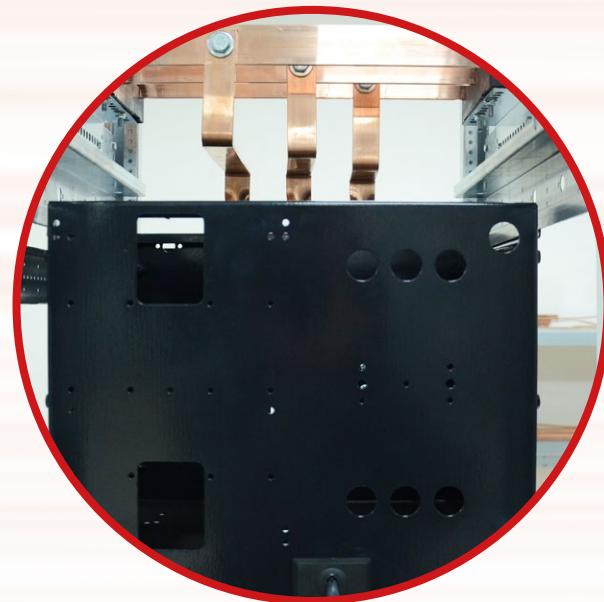

## Panel Structure

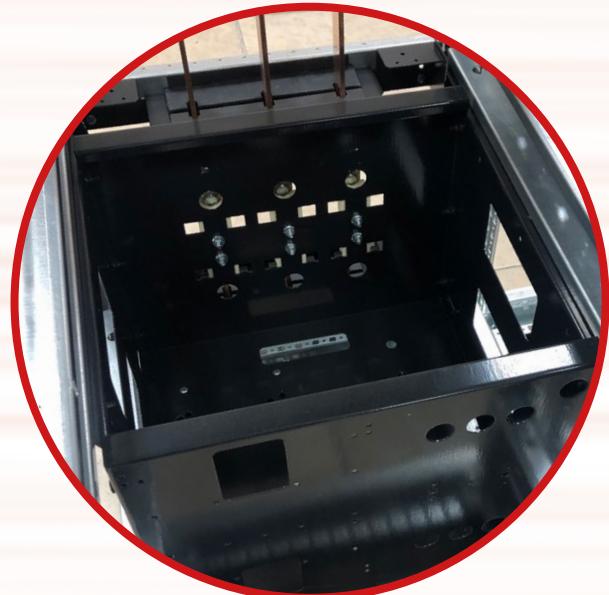

- Centering 320A (2x160A) slide-in system which allows power input, is used.
- 4 Pin socket electric terminal is used to ensure control transition between drawer and panel.
- Air flow is ensured via air wells in the drawer inside panel for ventilation and with ventilation unit outside the panel.

## Features of Panel

- Stage contactor and automats have been designed to allow installation in the front part of the drawer.
- Control switch which enables stage drawer to be removed safely has been used. The switch works with the stabilizing switch.
- Stage harmonic filter and condenser are installed inside drawer.

## Features of Panel

- Stage drawer is placed inside the drawer section with minimum stage gap.
- Stage drawer is fixed to the rail system with stabilizing switch after it has been placed in the drawer section. The switch turns on-off the control signal with the same movement.
- Stage drawer is moved on the rail via 4 bearings on the bottom of the drawer.

# OUTDOOR TYPE MODULAR PANEL

Outdoor type modular panels, designed to be used outdoor conditions can fulfill the usage requirements and their interior assembly is made as desired, using standard assembly profiles. Panels at various width and length are available with extensive product range.

## Technical specifications

Level of protection	IPS4
Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 7035
Type of Application	Outdoor

## Panel Structure

- Product groups that are suitable for use in outdoor conditions offer the most suitable solutions which can fulfill the demands of the users and with various accessory options.
- Completely standard products which are in stock are shipped pre assembled.
- Panels in various width and height are available with extensive product portfolio.

\*Please see page 32 of our catalog for detailed panel sizes and technical drawings.

## E-Assembly Applications

## Features of Panels

- Top profile has been designed with perpendicular covers on the sides and openable covers in the front and back to allow adding side by side.

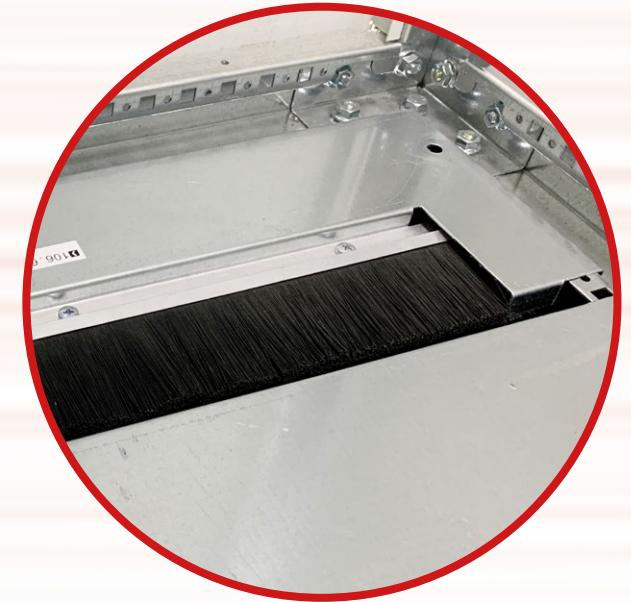

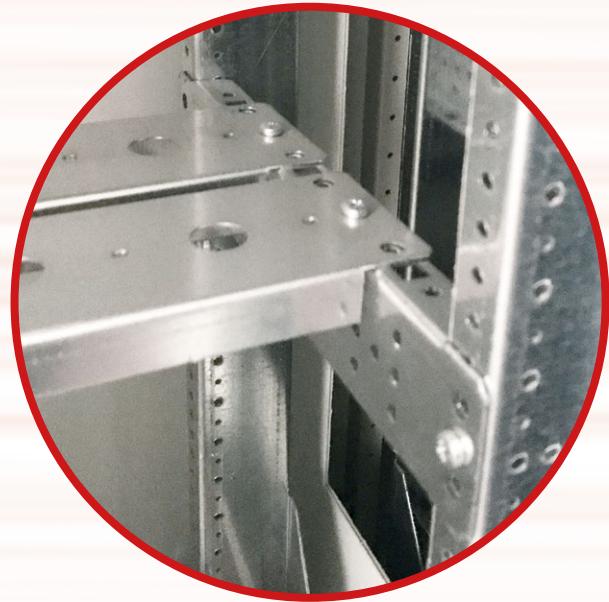

- Ventilation unit ensures air flow inside the panel with its dust preventive filter and maintains the temperature in the panel.

- Bracket connects to the structure profile skeleton and facilitates carrying of the panel.

## Features of Panels

- All installation profiles, used in indoor panels are also used in outdoor panels.
- Locking mechanism in the front doors connects to the panel body in four different points. Opening system of the door locks is of lift and turn type. It is suitable for locked or open use.
- Split covers are used to facilitate cable input. At least one of the split covers has a brush.

# WALL TYPE SURFACE MOUNTED MODULAR PANEL

Used in applications, especially such as floor distribution and automation with its various size options, this product group is a unique product with its functional and modular design. It encompasses optimum solutions with its portfolio in stock according to application type. It facilitates easy installation with brackets, assembled on the panels.

## Technical specifications

Level of protection	IP30
Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 7035
Type of Application	Indoor

## Panel Structure

- Although the panels are of mono-block design, they are manufactured without welding.
- Panels consist of profiles and bearings with hinges that are suitable for the use of DIN Rail or base assembly plate.

\*Please see page 48 of our catalog for detailed panel sizes and technical drawings.

## Features of Panels

- Rail and assembly plates to be used can be placed with a 200 mm space between them and changes can be made according to the requirements of the device, with surface mounted panels.
- Electrical cable entry points are produced as cover with brush, as standard. Optionally, bushed cable or closed entry cover is used.
- DIN rail plates and mini locks are used to prevent direct contact with electrical devices.

# FLUSH MOUNTED MODULAR PANEL

Used in applications, especially such as floor distribution and automation with its various size options, this product group is a unique product with its functional and modular design. It encompasses optimum solutions with its portfolio in stock according to application type. Panel installation case and electrical assembly kit have been designed as separable from each other.

## Technical specifications

Level of protection	IP30
Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 7035
Type of Application	Indoor

## Panel Structure

### Panel Assembly Casing

- Panel assembly casing is the part where the electrical assembly kit is installed. It is placed on the wall without any plastering process.

### Electrical Assembly Kit

- Electrical assembly kit is the part where the electrical devices are installed. It is placed on the assembly casing after devices are installed.

\*Please see page 47 of our catalog for detailed panel sizes and technical drawings.

## Features of Panels

- Interior of the panel has modular system to position the electrical devices optimally in the panel.
- Panel installation casing is assembled by using multiplication profiles. Multiplication profiles are also used as cable conduit channels in terms of their functions.
- DIN rail plates are used to prevent direct contact with electrical devices and mini locks are used for safety.

# CONSTRUCTION SITE PANELS

Construction site panels, designed to fulfill the demands of buildings and facilities in construction, have a functional structure.

## Technical specifications

Structure	Modular
Load-Bearing Construction	2 mm galvanized sheet
Coating	Epoxy-polyester powder coat
Color	Standard RAL 2004
Type of Application	Outdoor

## Panel Structure

- There are socket (three-phase+monophase) combination groups inside the panel. Cables of the electrical sockets are protected inside the panel when the panel cover is closed.

- Design of construction site panels accommodate ready section spaces, allocated for stray current protection relay, measuring counter, machine socket combinations and assembly of automats.

\*Please see page 50 of our catalog for detailed panel sizes and technical drawings.

## Features of Panels

- There is a durable front door and there are lock systems where padlocks can be installed on the doors to ensure the security of panels in construction site environments.
- Cable entry points have been designed to be wide to install cable entries to panels easily.
- Construction site panels are movable. They can be fixed to the concrete floor with screws where it has been transported. It has a specific compact structure which is not affected by weather conditions.
